Career Objective

Aspiring Software Engineer passionate about AI and healthcare technology. I aim to apply my programming, machine learning, and DevOps skills to contribute to Feyti Medical Group's mission of revolutionizing healthcare through AI innovation.

Education

Bachelor of Science in Computer Science – Kampala International University

Final Year Project: Plagiarism Detection System using Natural Language Processing

Technical Skills

Programming:	Python, JavaScript, C++
AI & ML:	TensorFlow, PyTorch (beginner), Scikit-learn
Web Development:	Django, Flask, React, Node.js
Database:	MySQL, PostgreSQL, Firebase
DevOps & Cloud:	Docker, Kubernetes, GitHub Actions, AWS (basic)

Key Projects

- Hybrid Malware Detection Model – Grant-winning AI project integrating machine learning for detecting malicious software.
- IPT Reminder System – Android system that reminds pregnant women to take IPT doses and notifies healthcare workers via SMS and FCM.
- KqahShop.com – E-commerce web application for selling body oils and butters, built using Django and Flutter.
- Anemia Detection App – Flutter app with TFLite model that detects signs of anemia through palm image analysis.
- Plagiarism Checker – NLP-based system developed as a final-year university project to detect academic plagiarism.

Professional Experience

Intern – Hakateq Solutions (2024 – Present)

- Assisted in web and mobile app development using Django, Flutter, and REST APIs.
- Contributed to software deployment workflows and version control using Git.

Strengths

- Strong foundation in Python and software engineering principles.
- Passionate about applying AI to healthcare innovations.
- Quick learner with solid problem-solving skills.
- Excellent teamwork and communication abilities.

Declaration

I hereby declare that the above information is true to the best of my knowledge.
